DETAILED ACTION

Specification

1. Applicant is reminded of the proper language and format for an abstract of the disclosure.

The abstract should be in narrative form and generally limited to a single paragraph on a separate sheet within the range of 50 to 150 words. It is important that the abstract not exceed 150 words in length since the space provided for the abstract on the computer tape used by the printer is limited. The form and legal phraseology often used in patent claims, such as "**means**" and "said," should be avoided. The abstract should describe the disclosure sufficiently to assist readers in deciding whether there is a need for consulting the full patent text for details.

The language should be clear and concise and should not repeat information given in the title. It should avoid using phrases which can be implied, such as, "The disclosure concerns," "The disclosure defined by this invention," "The disclosure describes," etc.

Drawings

2. The drawings are objected to because foreign notations are shown in figures 4, 10, and 11. A proposed drawing correction or corrected drawings are required in reply to the Office action to avoid abandonment of the application. The objection to the drawings will not be held in abeyance.

3. The drawings are objected to under 37 CFR 1.83(a). The drawings must show every feature of the invention specified in the claims. Therefore, the print buffer... arranged symmetrically must be shown or the feature(s) canceled from the claim(s). No new matter should be entered.

Art Unit: 2861

A proposed drawing correction or corrected drawings are required in reply to the Office action to avoid abandonment of the application. The objection to the drawings will not be held in abeyance.

Claim Objections

4. Claims 20, 22 are objected to because of the following informalities:

Regarding claim 20, "said apparatus" should have been "said recording head";

Regarding claim 22, "he ink" should have been "the ink". Appropriate correction is required.

Claim Rejections - 35 USC § 112

5. Claims 1-29 are rejected under 35 U.S.C. § 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

The following limitations lack antecedent basis:

"the recording head" (claims 1, 23, 28; line 3, 4);

"the scanning"; "said changing means", "the pixel areas (claim 8, lines 4-6);

"the recording head" (claim 1, line 3); and

"the symmetric recording heads" (claims 17, 18).

Re claims 4, 24, the phrase "a plurality of print buffers... arranged symmetrically" is not descriptive.

Claim Rejections - 35 USC § 102

6. The following is a quotation of the appropriate paragraphs of 35 U.S.C. § 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless --

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

(e) the invention was described in-

(1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effect under this subsection of a national application published under section 122(b) only if the international application designating the United States was published under Article 21(2)(a) of such treaty in the English language; or

(2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that a patent shall not be deemed filed in the United States for the purposes of this subsection based on the filing of an international application filed under the treaty defined in section 351(a).

7. Claims 1-3, 8-19, 22-23, 28-30 are rejected under 35 U.S.C. § 102(e) as being anticipated by Quintana. (EP 0955174)

Quintana (see particular fig.4) discloses every element of the instant claimed nozzle arrangement wherein recording of the ink of different colors to at least one the plurality of the secondary color pixel areas is performed corresponding to an order different from the order of another.

Art Unit: 2861

Pertinent Prior art

8. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

U.S. Patent 6,354,217 (col.7, abstract) discloses the use of mask patterns according to the forward and rearward direction to govern the deposition of the different color inks.

U.S. Patent 6,068,181 (abstract) discloses varying ink deposition order in bi-directional operation.
